

Viper Analytics is a high-technology information services firm staffed in part by U.S. Department of State veterans from NEA, EUR, INL, FSI, and PM. Our talented team takes on complex technical and informational challenges and then develops processes and materials to help larger organizations scale the most efficient solutions via model development, full-scope data management, and training.

In addition to ground-level experience overseas, Viper Analytics has significant past performance working with extremely large and complex data sets associated with foreign commercial, customs and law enforcement data and a wide swathe of data sources provided by international organizations. Currently, Viper Analytics is supporting an advanced text analytics project at J/TIP meant to synthesize tranches of text from documents such as cables in a potentially groundbreaking project that addresses the constant challenge of how to deal with information deluge.

Featured Capabilities

Recent Viper Analytics projects have included:

- **Program and Project Management**
 - ✓ Hands-on experience with DoS strategic planning processes, including JRS, ICS, and FBS
 - ✓ Developed and delivered an FSI course on the impact of disruptive technologies such as AI on foreign affairs
- **Custom Software Development**
 - ✓ Experts in crafting solutions for data visualizations to support decision-making
 - ✓ Arsenal of software for synthesizing text and visualizing document content through heatmapping
 - ✓ Geospatial applications development & integration
 - ✓ Algorithm development to support metrics and program evaluation
- **Data Management and Analytics**
 - ✓ Expert data collection, parsing, normalization, modeling, and reporting
 - ✓ Evaluation support through Multivariate data analysis
